

# Active Directory Login Fails

If using exacqVision version prior to 6.6, Active Directory login fails with Active Directory Forest Functional Level 2003 or earlier, you can edit streamapi.xml as a workaround:

1. Stop exacqVision Server.
2. Open streamapi.xml using a text editor such as Notepad.
3. Add element EnableActiveDirectoryUserDisabling.
4. Save and close the XML file.
5. Start exacqVision Server.

If using exacqVision version 6.6 or higher, 'Active Directory User Disabling' can be enabled on the 'ActiveDirectory/LDAP' tab.
