

ESM API api/docs does not support file upload/download

Description

If using esm api docs at /docs/api, any file upload/download action will not work.

The documentation does not even provide the correct input to upload/download files.

Version introduced

v3.8.0.89234

Platform

All.

Steps to reproduce

- Navigate to <http://esmhost/docs/api>, once fully loaded,
- Click on system
- Click on [GET] /api/system/logs/bundle/
- Click on [Try it out!]

Expected result

- File is downloaded during file download
- Upload button/handle is provided to upload file

Actual result

- Documentation page will just try to display the contents of the file on download.
- There is no upload button/handler

Work around

- Get logs using browser at <http://esmhost/api/system/logs/bundle>, OR use command line tools to get logs from <http://esmhost/api/system/logs/bundle>
- This is the same for any other file upload or download
