

# ESM API exacqVision Server License Filter by isCurrent does not work

## Description

<https://tyc100.exacq.net/api/servers/tyc100er1249023085/licenses/?isCurrent=True>

When using the above API, the isCurrent filter does not properly filter out the old licenses. A similar filter works on the generic API for all servers.

<https://tyc100.exacq.net/api/servers/licenses/?server=tyc100er1249023085&isCurrent=True>

## Version Introduced

4.1.7.95208

## Platform

- All Platforms

## Steps to reproduce

Verify that the link:

<https://tyc100.exacq.net/api/servers/tyc100er1249023085/licenses/?isCurrent=True>

only returns licenses with isCurrent field set to true

## Expected result

- Only license with isCurrent field set to true are returned

## Actual result

- All licenses with isCurrent field set to either true/false

## Work Around

<https://tyc100.exacq.net/api/servers/licenses/?server=tyc100er1249023085&isCurrent=True>
