exacqVision Support Portal

M-Series Translations

1. Start LXTerminal.

2. Change to admin user.

su admin

3. Change to the admin home directory.

cd

4. Download and execute the m-series script from translations server.

curl -fsSL https://translate.exacq.com/m-series.sh | sh

5. Progress messages will scroll as the script executes. The last will be about installing the m-series lang.

Enable Translations

The process is the same for any language, but this example shows application of Japanese.

1. Open System Settings dialog. Enter the admin password when prompted.
