

Web Server - Saving frame image doesn't include file extension

Description

When saving an image from a search, the file extension is not included on the file. The image data is correct, but the lack of extension causes the user to manually select an image viewer.

Tested Version

7.8.2

Platform

[All]

Steps to reproduce

1. Create a search and start playback.
2. Select the "Save Image" button.

Expected result

The image file is downloaded with a .jpg extension.

Actual result

The image file is downloaded with no extension.

Work Around

Rename the downloaded image file to include the .jpg extension.
