

Bad Package Quality Error when Installing exacqVision Software on Ubuntu 11.04

Exacq recommends installing exacqVision software on Ubuntu 10.04 because of its extensive testing within the Ubuntu community and its status as a Long Term Support version.

However, if you try to install exacqVision Client and exacqVision Server software version 4.5 and older, exacqVision Web Service, or Enterprise Health Manager on a Ubuntu 11.04 system, the new Ubuntu Software Center installer displays a false error message indicating a "package of bad quality." This error can be ignored. Changes in exacqVision version 4.6 prevent this message from being displayed.
