Security as a Service. Cloud Video Surveillance. Cloud Access Control.

Cloudvue 22.9

Dear Customers,

Cloudvue is proud to announce the latest **update** to our Cloudvue platform, version 22.9. This update contains Cloudvue, Cloudvue Manager, Cloud Gateway, Mobile Apps, and Illustra Cloud Camera updates, which will be deployed during the scheduled maintenance window from Wednesday, February 1, 2023 through Monday, February 6, 2023. There is no action required on your part and all gateway devices and cloud cameras will automatically update and reboot during the maintenance window. All new features, improvements and enhancements will be automatically available to you once the maintenance window has closed.

Improvements and Features and Enhancements

The following improvements, issue resolutions and integrations are included in the 22.9 release.

Improvements

- Digital vs Optical zoom improvements
- Mobile app UI / UX improvements
- Archived bookmark performance improvements

Issue resolutions

- Device ID information missing for panel less and panel-based reader
- Users page UI utilizing other languages
  (German, Spanish, Italian, Portuguese, Russian, and French)
- Connectivity issue while enrolling KT-1
- Removing a camera in Cloudvue forces user back to login page
- ONVIF: Multi-stream crash when choosing proper encoding using compatible encoders
- Video intelligence reporting icon
- The Search Access Controller table does not display the version number of the controller in the Version column
- Clarify Hyperview error message

New Integrations

- Illustra Pro Gen 4 Mini-Dome – IPS04-D12-0I04 as a C2C (later update)
