

Cloudvue Hyper View Overview and Usage

KB Number: 23452

Published: 09/03/2026

Introduction

Hyper View is a cloud based feature that compiles video clips from both C2C and Cloudvue Gateway cameras into a continuous 60 second recap video for any 24 hour period. This feature is accessed directly from cloudvue.com and operates independently from normal archived video storage. Because Hyper View uses its own clip generation process, it is possible to see Hyper View footage even when traditional archived video is unavailable.

Accessing Hyper View Option 1

1. Log in to **cloudvue.com**.
2. Navigate to the desired camera.
3. Click the **lightning bolt icon** next to the live view to open Hyper View.

Accessing Hyper View Option 2

1. Log in to **cloudvue.com**.
 2. Open a Custom View, Location or Cloudvue Gateway
 3. Click the **lightning bolt icon** located in the right-hand Navigation Tree. A Hyper View with all the cameras will be generated.
-

Navigation and Date Selection

- When Hyper View opens, it automatically begins downloading and playing footage for **the current date**.
- To view a different date:
 - Click the **calendar icon**, or
 - Use the **left/right arrows** beside the date.

- Hyper View stores approximately **30 days of video per camera**.
-

Playback Controls

- Use the **pause / play** button to stop and start playback.
 - Once paused, click the **search icon** to open archived video at the **exact date and time** shown in Hyper View.
-

Analytics Box Colors

During playback, Hyper View may display colored boxes identifying object detections if they are enabled.

Clolor	Meaning
Red	Motion Detected
Green	Vehicle Detected
Orange	Person Detected
