

Get the Monitor Size (resolution) Back for Linux Systems

The monitor can get stuck in 640*480 mode if the system is booted with no monitor connected.

To get the monitor size back for Linux systems, complete the following steps after opening Terminal:

1. Type `cd /etc/X11`
2. Type `sudo mv xorg.conf xorg.bak.conf`
3. Restart the system with a monitor attached.
