

How to disable all logging in the web service

Description

Note: This KB contains the information found in KB 24844, as well as additional information.

Based on a customer request ,the following steps document how to disable all logging in Apache:

1. Use a text editor to open the Apache configuration file.
 - Windows: C:\Program Files (x86)\exacqVision\WebService?\Apache\conf\httpd.conf.
 - Linux: /etc/evapache/httpd.conf
2. Find the following line in the Access log
 - CustomLog "logs/access.log" common
3. Add a hashtag/pound sign at the start:
 - #CustomLog "logs/access.log" common
4. Find this line in the Error log
 - ErrorLog "logs/error.log"
5. Add a hashtag/pound sign at the start:
 - #ErrorLog "logs/error.log"
6. Save the file and restart the exacqVision Web Service.

Note: Depending on the user's SSL configuration, the above steps may need repeated in the httpd-ssl.conf file.
