

The integration between INEX/ZAMIR ALPR (Automatic License Plate Recognition) camera and exacqVision enables the system to search recorded video by license plate and use license plates to identify vehicles of interest

- **Cost-effective solution:** Dual Sensor Technology eliminates the need for additional CCTV camera installations as both, overview & ALPR, sensors located within the system
- **Higher level of security:** License plates can be used to identify vehicles of interest, recognize suspicious behavior to notify security personal. Security personal can be notified on the specific LP events with audio/text/email alarms
- **Fast forensics:** Ability to search video records by known LP data reduces forensics time, enabling a quick and efficient response from security personnel
- **No learning curve:** All user data and decision-making remains in the existing video management control system
- **Easy data discovery:** A central repository of all ALPR metadata provides access to the real-time and historical LP data
- **Accurate plate recognition:** The system can reliably read any plate type, at any lighting & weather conditions
- **Automatic:** Using the license plate as an 'alert trigger' requires no intervention from the operator, eliminating human mistakes

INEX/ZAMIR ALPR (Automatic License Plate Recognition) system integrated with exacqVision offers the most effective vehicle identification and surveillance solution. The integrated system reads and stores license plate of the passing vehicles into VMS database for investigative use, data analysis, mapping, and sharing with various agencies. The integration enables exacqVision to receive and display vehicle license plates, and to compare license plate data with existing vehicle databases (such as BOLO (Be-On-Lookout), blacklists and whitelists, stolen vehicles, etc.) The system automatically identifies the passing vehicle and alerts the operator.

The ALPR system also enables the VMS to analyze vehicle patterns. When a vehicle has been within the ALPR Camera Systems field of view for more than a configurable number of times within a given time, the system can alert the security personnel and record the time and GPS coordinates of the encounter.

INEX/ZAMIR ALPR TO EXACQVISION DATA FLOW

IZSECURITY SOLUTION SYSTEM COMPONENTS & SOFTWARE

IZA500 ALL-IN-ONE SYSTEM

- ✔ All-In-One: The IZA500 combines two cameras (B&W and color), a quad core processor, and ALPR software in a single unit.
- ✔ Real Time ALPR Engine: Less than 1/4 of a second plate processing time
- ✔ Multiple IR Flash Technology: Enables the camera to capture multiple plate images, ensuring the highest quality photo, in all lighting and weather conditions
- ✔ Dual Sensor Camera: Delivers both color and infrared images of the vehicle and the license plate

IZSERVER FOR EXACQVISION SOFTWARE

- ✔ Designed for corporate/government/educational facilities, gated communities
- ✔ Supports primary and secondary credentialing
- ✔ Integrates with exacqVision

ABOUT INEX/ZAMIR

INEX/ZAMIR has been supplying proven ALPR (Automatic License Plate Recognition) / ANPR (Automatic Number Plate Recognition) technology since 1993. We are the resource that organizations around the world turn to for license plate reader cameras and tailored solutions. Using advanced IR (infrared) LED technology, INEX/ZAMIR solutions effectively capture license plate data from passing vehicles in real time at any time, day or night.

For further information about INEX/ZAMIR's IZSecurity solution, and all of our other system components and solutions, please contact info@inexzamir.com.
