My system with tDVR boards will not show black and white video source.

Systems that have a tDVR analog capture card will report video loss on a channel that is fed by a black and white source.

Tested Version

tDVR SDK versions

Platform

Windows/Linux Z series and A series refresh

Steps to reproduce

Connect a black and white video NTSC/PAL source. The channel will show up as video loss.

Expected result

Channel should not show up with video loss

Actual result

Channel shows video loss

Introduced Version

All tDVR SDK versions

Work Around

tDVR must be updated

You can download the proper tDVR drivers at our main download page.
