Cloudvue

The last camera you will ever buy

Introducing
Security as a Service

One annual license includes everything – for life

You no longer have to hassle with old camera warranties or bother with the process and capital expense of buying new cameras. With Cloudvue Security as a Service, simply pay an annual fee for surveillance cameras and cloud video management services.

Enterprise surveillance simplified.

Start by selecting a camera plan. The annual Cloudvue Security as a Service license includes your choice from several camera models, unlimited cloud video storage for bookmarked video, unlimited users and privileges, live and recorded video management and the Cloudvue Manager service for system management.

Advance replacement warranty support is provided for three years, and can then be extended year by year, without limits.

Simple setup

60 second setup on almost any network. Just connect your new cloud camera to your network and use the Cloudvue mobile app for instant setup.

Fast video

Access live video from anywhere across the country, and from over 140 countries worldwide.

Smarter surveillance

Watch over more in less time with intelligent alerts, custom views and powerful search tools. Turn surveillance data into actionable intelligence that can be quickly distributed across an organization.

Search through 24 hours of video from one or more cameras at same time in about 60 seconds, filter by motion detection or people detection, and quickly find events for incredibly fast incident investigations.

We have a solution for that.

We invented cloud video surveillance in 1999 and we have been continuously innovating ever since. This gives Cloudvue a proven track-record for reliability and security. Today, Cloudvue is trusted all over the world to simplify surveillance, streamline access control, and provide powerful intelligence that improves security operations and helps with organizational efficiency. From banks to retail chains and industrial complexes to entire cities, we have a solution that will work with your project.
