

## Your Partner in Loss Prevention Solution

One easy platform for managing and controlling your security

### Tyco Cloud helps you

- Protect shoppers and employees
- Reduce shrinkage
- Manage your staff remotely
- Design better store layouts and merchandise placement

**From any device,  
anywhere in the world!**

### Ideal for retailers, big and small

Keeping an eye on your business – whether you run a single store or a national chain with hundreds of locations – is essential for your success.

There's so much to monitor: shoplifting, break-ins, inventory theft, vandalism, unsociable behavior, employee activity, customer service interactions and more. And then there's what's going on in the parking lot, storage room, and even garbage facilities. How can you possibly manage it all?

**The answer is Tyco Cloud.** In addition to providing proof of situations that have already occurred, Tyco Cloud uniquely serves as a proactive tool to prevent incidents, help improve service to customers, and provide visibility into staff productivity.

Trusted by thousands of business worldwide, Tyco Cloud not only simplifies your security, it can reduce your surveillance and access control costs by up to 30%, through savings in equipment, labor, electricity, network costs, and more.

## Tyco Cloud – One platform for retail physical security

### Video Surveillance

- No costs or headaches of onsite servers
- Unlimited users with no license expense or restrictions
- No truck rolls needed for maintenance or software upgrades
- Fast deployment – all you need is an internet connection
- Minimal cost of storing video footage in the cloud vs. on-site servers
- You can search through video from up to 100 cameras at the same time in 60 seconds
- Works with your legacy IP cameras

### Access Control

- Manage access any time and unlock doors from anywhere using the Tyco Cloud mobile app
- View live door activity and surveillance video from any access point, on one simple interface
- Allows personnel to access facilities using their smartphone
- Quickly and securely assign and revoke credentials to the user's smartphone

### A secure data environment against cyber attacks

- End-to-end encryption and double-redundant cloud backed by Johnson Controls cyber and GDPR security programs
- Video recorded is almost instantaneously communicated to and stored within a highly secure Microsoft Azure data center
- Data center is regulated by stringent federal security mandates and privacy guidelines
- No open ports, on-site software or the need for on-site firewalls, eliminating several crucial cyber attacks avenues
