## Upgrading exacqVision Enterprise Health Manager -- SQLite Database Access

If you select the SQLite database when installing or upgrading exacqVision Enterprise Health Manager (eVEHM) in Windows Vista or Windows 7 and install the database in or under the Program Files directory, you will have to right-click and select Run as Admin every time you use the eVEHM Client. The Client requires elevated privileges to read and write to a database in or under Program Files.

To avoid selecting Run as Admin every time you run eVEHM Client, save the database file to a directory that is not under Program Files.

🍍 exacqVision Enterprise Health Manager Client and Server - 1.3 🗐 🗖 🔀	
<b>Configure SQLite Database Connection</b> Specify details regarding the SQLite database to be accessed.	exacqVision EnterpriseHealthManager
Database File Location:	
C:\Program Files\evHealth.db	Browse
Please note that if the Health database file is in a directory undern have to start the Health Client with elevated privileges (Right-Click you use it.
