

Overview

The integration of exacqVision Video with the i-View Now "CheckVideo" system provides video verification alarms to central monitoring stations. This document will provide a brief description of how to configure this.

Requirements

exacqVision License: Start for virtual alarm signaling or Professional if hardware contacts

IP Cameras: exacqVision supports over 4000 camera models.

Any camera connected to the exacqVision VMS will provide the video stream needed.

I-View Now: active account

Setup

Once exacqVision is installed, licensed, and cameras are configured, the i-View Now cloud based system handles utilizing those video streams. There is no separate software or hardware to install. The following sections will show you how to create a site and configure cameras in the CheckVideo system.

I-View Now Portal

After logging into the I-View Now Portal you will first have to create a Sit.

Once the site has been created and the basic account information filled in you are taken to the Add Device(s) page. Here you will need to add a CheckVideo device to the site by choosing **[CheckVideo]**. In the next field **[Choose Model]** you will have a choice of 4 Channel Encoder or Camera (for this example we are using the 4 channel encoder).

Sites Edit Device Testing Co. 2.0	Add Device	<u>(s)</u>			
Device Model:	CheckVideo	۲	4-channel I	Encoder 🔻	Managed by IP gateway
		Add Anot	her Device	Remove I	Last Device
		ſ	Add Device	es To Accou	int

When finished click [Add Devices To Account].

+1.317.845.5710 +5255.56080817 +44.1438.310163 +31.485.324.347 USA (Corporate Headquarters) Mexico Europe/Middle East/Asia Central Europe

Page 1 of 6 August 2019

www.exacq.com

exacqVision

Once added to the account it will look like the example below. I-View Now generates a unique SMTP Account ID that will be used in the configuration of the CheckVideo Portal.

Click on [Edit This Device] to start adding information that is used in BOTH portals.

Chec	kVideo 4-channel Encoder
SMTP Account ID:	cv8m3tk1vgxcrgo@ivnview.com
MAC Address:	
CheckVideo Portal URL:	
Timezone:	America/Los_Angeles (UTC-07:00 DST)
Notes:	
Alarm inputs	
No alarn	n inputs assigned to this device.
Remove Th	is Device Edit This Device
	Expand

In the field labeled **[Device Name]** Replace "CheckVideo 4-channel Encoder" with the site name for the CheckVideo portal. This must be typed *exactly* the same as it was in the CheckVideo Portal, so it is recommended that it be typed manually, rather than copied and pasted. In the fields **[Username]** and **[Password]** enter in the username and password for the **CheckVideo Portal**.

In the field labeled **[CheckVideo Portal URL]** enter in the URL address you use to connect to you CheckVideo Portal. Example: yourname.checkvideo.net

Now we can add and associate the cameras that you have set up in the CheckVideo Portal by clicking **[Add].** Add each device as an Alarm, Camera 1 and then the Zone Name. It has to match **<u>EXACTLY</u>** what is in the CheckVideo Portal. When finished click on **[Update Device]** to save your work.

Device Name:	SkateQuest CV400	2

Once the cameras are added and you have clicked Update Device, make note of the SMTP Account ID and go back to the CheckVideo Portal for the Notification Configuration.

On the CheckVideo Portal under [**Configure Device**], choose your device and it will take you to a screen with all of the cameras on it.

The following steps must be performed for each camera.

Device Configuration

- 1. Select your first camera and click on [Select Notification Method] in the lower right corner.
- 2. Select the Central Station Type from the drop down. Choose [I-View Now]
- 3. Enter the SMTP (email) Server [ivnview.com] and the Port [3480]
- 4. Under Live Access Username enter [iviewnow]
- 5. Under Live Access Password enter [12mF9ws!]
- 6. Video Format enter [mp4] from the drop down
- 7. In Diagnostic Notifications enter [checkvideo@i-viewnow.com]

Check [Yes, Send Poor Video Alerts to Central Station] This way you will be notified of camera issues.
